

EANM CARDIOVASCULAR LEARNING COURSE (Myocardial Perfusion Imaging / Gated SPECT)

GENERAL INFORMATION

Goals and curriculum

The EANM Cardiovascular Committee prepared a teaching course on nuclear cardiology that provides in-depth theoretical and practical training in state of the art nuclear imaging of myocardial perfusion and function. Hands-on experience in computer analysis and interactive interpretation of combined perfusion and function studies will be a special focus. The goal is to provide participants with sufficient knowledge of cardiovascular imaging methodology to be able to offer a standardised, high-quality, state of the art myocardial perfusion imaging service.

The course includes lectures on imaging hardware, standardised myocardial perfusion scan analysis, functional analysis of gated datasets, reporting of studies and future developments, and interactive case studies on correlative perfusion/function analysis, pitfalls and quality control, prognosis and viability assessment.

The focus on this course is on aspects related to the practice of cardiovascular studies for nuclear physicians, and is expected to complement a course on nuclear cardiology for cardiologists which is offered annually by the European Society of Cardiology (ESC) at the European Heart House and which concentrates more strongly on clinical aspects.
